                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Percent Similarity:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CC containing the vector (e.g. bacteria, yeast, plant, animal, mammalian CC and insect cells) and an anti-CARD antibody. The CARD-containing CC polypeptide and CARD-encoding nucleic acid are useful for treating a CC pathology characterised by abnormal cell proliferation (e.g. cancer), CC abnormal cell death (apoptosis), autoimmune diseases or inflammation. In CC particular, the polypeptide and nucleic acid are useful for treating a CC keratinceyte hyperplasia, inflammatory hyperplasia, fibrosis, smooth CC muscle cell proliferation in arteries following balloon angioplasty CC (restenosis), gliomas, carcinomas, sarcomas, melanomas, leukaemias, CC (restenosis), gliomas, carcinomas, sarcomas, melanomas, leukaemias, CC allergies, arthritis, lupus, Schrogen's syndrome, Crohn's disease, CC qraft-versus-bost disease, stroke, myocardial infarction, heart failure, CC neurodegenerative diseases (e.g. Parkinson's disease or Alzheimer's CC disease) or immunodeficiency associated disease (e.g. human CC imaunodeficiency virus (HIV) infection. The nucleic acids are useful CC in a variety of diagnostic applications. The present sequence is a CC CDNA encoding a CARD domain containing protein.

These were derived from expressed sequence tags (ESTs from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a cDN processity and for nutritional purposes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Isolated polypeptide for treatment antibodies and research use -

                                                                                                                                                                                                                                      The present sequence encodes a human secreted polypeptide. The secreted polypeptides and polynucleotides are useful for treating recreated polypeptides and polynucleotides are useful for treating nervous and muscular diseases, for inhibiting tumour formation and metastasis, for treating gastrointestinal ulceration, for preventing and treating diseases in spinal cord, thyroid gland, ovary, prostate, renal gland, small intestine, heart, trachea, thymus, lymph node, muscular system and colon, for treating lipase deficiency in cystic fibrosis and pancreatitis, for treating undesirable clot formation such as myocardial infarction, during angioplasty and all surgical procedures that require decreased blood clot formation, for treating limune disorders, for treating inflammation and transplant rejection, for enhancing bone thickness and increasing bone density, for reducing the loss of essential ferroxidases, for suppressing apoptosis, and for regulating vascular smooth cell proliferation. The invention relates to an isolated caspase recruitment domain (CAR -containing polypeptide, or a CARD, NB-ARC, ANGIO-R, LRR or SAM doma from it, and the polynucleotides encoding them. Also included are a recombinant vector comprising the polynucleotide, recombinant cells containing the vector (e.g. bacteria, yeast, plant, animal, mammalia and insect cells) and an anti-CARD antibody. The CARD-containing
                                                                                                                                                                                                                           Reed JC,

In particular, the polypeptide and nucleic acid are useful for treating keratinocyte hyperplasia, inflammatory hyperplasia, fibrosis, smooth muscle cell proliferation in arteries following balloon angioplasty (restenosis), gliomas, carcinomas, sarcomas, melanomas, leukaemias, altergies, arthritis, lupus, Schrogen's syndrome, Crohn's disease, graft-versus-host disease, stroke, myocardial infarction, heart failure, neurodegenerative diseases (e.g. Parkinson's disease or Alzheimer's disease) or immunodeficiency associated disease (e.g. human inmunodeficiency virus (HIV) infection). The nucleic acids are useful in a variety of diagnostic applications. The present sequence is a

CARD domains are found in a CC number of proteins that transmit signals that activate apoptosis and CC inflammatory pathways in response to stress and other stimuli. Therefore, CC CARD-12 and its corresponding nucleic acid may be used in treatment and CC diagnosis of patients suffering from disorders associated with an CC abnormal level (an increase or a decrease) of apoptotic cell death or CC abnormal activity of stress-related pathways. The disorders include CC cancer, viral infections (e.g. caused by poxviruses, adenoviruses), CC autoimmune disorders (e.g. systemic lupus erythematosis, arthritis), CC neurological disorders (e.g. Alzheimer's disease, amyotrophic lateral CC sclerosis), haematologic diseases (e.g. aplastic anaemia, myocardial CC infarction, stroke), inflammatory and immune system disorders (e.g. CC crohn's disease, insulin-dependent diabetes, contact dermatitis, CC psoriasis, graft rejection), bacterial infections (e.g. tuberculosis, contact dermatitis, CC ischaemia/reperfusion injury, schiemic brain damage, acute bacterial

The present sequence encodes a human secreted polypeptide. The conservation of the present sequence encodes and polypucleotides are useful for treating concervous and muscular diseases, for inhibiting tumour formation and metastasis, for treating gastrointestinal ulceration, for preventing and treating diseases in spinal cord, thyroid gland, owary, prostate, cand treating diseases in spinal cord, thyroid gland, owary, prostate, consucular system and colon, for treating lipase deficiency in cystic fibrosis and pancreatitis, for treating undesirable clot formation could be a myocardial infarction, during angioplasty and all surgical concedures that require decreased blood clot formation, for treating treating immune disorders, for treating inflammation and transplant concedures that require decreased blood clot formation, for treating treating immune disorders, for treating inflammation and transplant conceduring the loss of essential ferroxidases, for suppressing the loss of essential ferroxidases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                06-MAR-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence
        The invention relates to a canine interleukin 18 (dIL18) and a canine interleukin 1 beta convertase (dICE) which can cleave precursor forms of dIL18 and interleukin 1 beta to give the active forms. Host cells transformed by vectors comprising the dIL18 DNA (optionally with DNA coding for dICE) are used for the recombinant expression of the protein. The canine interleukin 18 is able to act on canine leukocytes to induce a factor potentiating the expression of class II MHC on canine tumour
                                                                                                                       Canine interleukin 18 and canine interleukin 1-beta convertase For treatment of immune disorders of dogs including cancer, allergies and inflammatory diseases.
                                                                                                                                                                                                                                                                                                                                         Canis sp

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes canine interleukin 18 (IL-18). Canine IL-18 is capable of inducing an antiviral activity factor and a factor reinforcing the expression of class II MHC molecules on canine tumour calls by reacting with canine leukocytes, promoting the growth of canine lymphocytes, reinforcing the expression of Fas ligand on canine lymphocytes and canine tumour cells, obstructing and killing canine tumour cells, reducing the tumour formed in a canine body and preventing canine allergy by activating canine leukocytes. Canine IL-18 is used for the treatment of canine inmune diseases. The present invention also describes the canine inmune diseases. The present invention also describes the canine incerleukin lbeta conversion enzyme (ICE), which has the ability of cleaving the precursor proteins of interleukin lbeta and IL-18 to convert them to their active types. The present sequence

The camine interleukin 18 is able to act on canine leukocytes to induce a factor potentiating the expression of class II MHC on canine tumour cells; to promote the proliferation of canine lymphocytes; to potentiate the expression of Fas ligand on canine lymphocytes and tumour cells; to damage and kill canine tumour cells; to reduce tumour size in the living dog; and to activate canine leukocytes to inhibit allergies. dII18 in combination with dII12 can be used for the treatment of immune disorders of dogs, such as cancer, allergies, infectious diseases or skin

                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes canine interleukin 18 (IL-18). Canine IL-18 is capable of inducing an antiviral activity factor and a factor reinforcing the expression of class II MHC molecules on canine tumour cells by reacting with canine leukocytes, promoting the growth of canine lymphocytes, reinforcing the expression of Fas ligand on canine lymphocytes and canine tumour cells, obstructing and killing canine lymphocytes and canine tumour formed in a canine body and preventing canine allergy by activating canine leukocytes. Canine IL-18 is used for the treatment of canine immune diseases. The present invention also describes the canine interleukin lbeta conversion enzyme (ICE), which has the ability of cleaving the precursor proteins of interleukin lbeta and IL-18 to convert them to their active types. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   P-PSDB;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   07-AUG-1997;

The cDNA can be isolated from human Jurkat cell lines or human osteoclastoma stromal cell lines and incorporated into bacterial, mammalian or baculovirus expression vectors for use in prodn. of recombinant hIAP-1. It can also be utilised in the diagnosis or gene therapy of diseases related to hIAP-1 under-expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Polynucleotide encoding human inhibitor of apoptosis gene 1 - useful for treating degenerative diseases, as antiviral defence mechanism and preventing cell death during trauma and strokes
                                                                                                                                                                                                                                                                                                                                         Sequence 1435 BP;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                       Score

Application US/09864921

Patent No. US20020176853A1 GENERAL INFORMATION:

APPLICANT: Reed, John C.
APPLICANT: Pio, Frederick F.
APPLICANT: Godzik, Adam

APPLICANT:

Stehlik, Christian Damiano, Jason S.

```
APPLICANT: Lee, Sug-Hyung
APPLICANT: Oliveira, Vasco A.
APPLICANT: Hayashi, Hideki
APPLICANT: Hayashi, Hideki
APPLICANT: Pawlowski, Krzysztof
TITLE OF INVENTION: No. US20020176853Alel Card Domain Containing
TITLE OF INVENTION: Polypeptides, Encoding Nucleic Acids, and Methods of Use
FILE REFERENCE: P-LJ 4752
CURRENT APPLICATION NUMBER: US/09/864,921
CURRENT FILING DATE: 2000-05-23
PRIOR APPLICATION NUMBER: US 09/579,240
PRIOR APPLICATION NUMBER: US 09/586,347
PRIOR APPLICATION NUMBER: US 09/686,347
PRIOR FILING DATE: 2000-10-10-10
PRIOR FILING DATE: 2001-03-14
NUMBER OF SEQ ID NOS: 195
SOFTWARE: FastSEQ for Windows Version 4.0
```
